ORDINANCE NO. 2004 10

AN ORDINANCE ESTABLISHING SHORELAND
REGULATIONS AND PROVIDING A
PENALTY FOR VIOLATIONS THEREOF

The City Council of the City of Rogers ordains:

Section 1. Statutory Authorization and Policy

1.1 Statutory Authorization

This shoreland ordinance is adopted pursuant to the authorization and policies contained in Minnesota Statutes, Chapter 103F; Minnesota Rules, parts 6120.2500-6120.3900, and the planning and zoning enabling legislation in Minnesota Statutes, Chapter 462.

1.2 Policy

The uncontrolled use of shorelands of the City of Rogers, Minnesota affects the public health, safety and general welfare not only by contributing to pollution of public waters, but also by impairing the local tax base. Therefore, it is in the best interests of the public health, safety and welfare to provide for the wise subdivision, use and development of shorelands of public waters. The Legislature of Minnesota has delegated responsibility to local governments of the state to regulate the subdivision, use and development of the shorelands of public waters and thus preserve and enhance the quality of surface waters, conserve the economic and natural environmental values of shorelands, and provide for the wise use of waters and related land resources. This responsibility is hereby recognized by the City of Rogers.

1.3 Title

This Ordinance shall be known as the “Rogers Shoreland Management Ordinance”.

Section 2. General Provisions and Definitions

2.1 Jurisdiction

The provisions of this Ordinance shall apply to the shorelands of the public water bodies as classified in Section 4.0 below. Pursuant to Minnesota Rules, parts 6120.2500 - 6120.3900, no lake, pond, or flowage less than ten (10) acres in size will be regulated. A body of water created by a private user where there was no previous shoreland shall be exempt from this Ordinance.

2.2 Compliance

The use of any shoreland of public waters; the size and shape of lots; the use, size, type and location of structures on lots; the installation and maintenance of water supply and

waste treatment systems, the grading and filling of any shoreland area; the cutting of shoreland vegetation; and the subdivision of land shall be in full compliance with the terms of this Ordinance and other applicable Regulations.

The "S", Shoreland District shall be applied to and superimposed upon all zoning districts established in the Rogers Zoning Ordinance as existing or amended by the text and map of such zoning ordinance. The Regulations and requirements imposed by the "S", Shoreland District shall be in addition to those established for districts which jointly apply. Under the joint application of districts, the more restrictive requirements shall apply.

2.3 Enforcement

The City of Rogers is responsible for the administration and enforcement of this Ordinance. Any violation of the provisions of this Ordinance or failure to comply with any of its requirements (including violations of conditions and safeguards established in connection with grants of variances or conditional uses) shall constitute a misdemeanor and shall be punishable as defined by law. Violations of this Ordinance can occur regardless of whether or not a permit is required for a regulated activity pursuant to Section 3.1.

2.4 Interpretation

In their interpretation and application, the provisions of this Ordinance shall be held to be minimum requirements and shall be liberally construed in favor of the governing body and shall not be deemed a limitation or repeal of any other powers granted by State Statutes.

2.5 Severability

If any section, clause, provision, or portion of this Ordinance is adjudged unconstitutional or invalid by a court of competent jurisdiction, the remainder of this Ordinance shall not be affected thereby.

2.6 Abrogation and Greater Restrictions

It is not intended by this Ordinance to repeal, abrogate, or impair any existing easements, covenants, or deed restrictions. However, where this Ordinance imposes greater restrictions, the provisions of this Ordinance shall prevail. All other ordinances inconsistent with this Ordinance are hereby repealed to the extent of the inconsistency only.

2.7 Definitions

Unless specifically defined below, words or phrases used in this Ordinance shall be interpreted so as to give them the same meaning as they have in common usage and so as to give this Ordinance its most reasonable application. For the purpose of this Ordinance,

the words "must" and "shall" are mandatory and not permissive. All distances, unless otherwise specified, shall be measured horizontally.

2.711 Accessory structure or facility. "Accessory structure" or "facility" means any building or improvement subordinate to a principal use which, because of the nature of its use, can reasonably be located at or greater than normal structure setbacks.

2.712 Bluff. "Bluff" means a natural topographic feature such as a hill, cliff, or embankment having the following characteristics (an area with an average slope of less than eighteen percent (18%) over a distance for fifty (50) feet or more shall not be considered part of the bluff):

- (1) Part or all of the feature is located in a shoreland area;
- (2) The slope rises at least twenty-five (25) feet above the ordinary high water level of the waterbody;
- (3) The grade of the slope from the toe of the bluff to a point twenty-five (25) feet or more above the ordinary high water level averages thirty percent (30%) or greater; and
- (4) The slope must drain toward the waterbody.

2.713 Bluff impact zone. "Bluff impact zone" means a bluff and land located within twenty (20) feet from the top of a bluff.

2.714 Boathouse. "Boathouse" means a structure designed and used solely for the storage of boats or boating equipment.

2.715 Building line. "Building line" means a line parallel to a lot line or the ordinary high water level at the required setback beyond which a structure may not extend.

2.716 Commercial planned unit developments. "Commercial planned unit developments" are typically uses that provide transient, short-term lodging spaces, rooms, or parcels and their operations are essentially service-oriented. For example, hotel/motel accommodations, resorts, recreational vehicle and camping parks, and other primarily service-oriented activities are commercial planned unit developments.

2.717 Commercial use. "Commercial use" means the principal use of land or buildings for the sale, lease, rental, or trade of products, goods, and services.

2.718 Commissioner. "Commissioner" means the commissioner of the Department of Natural Resources.

2.719 Conditional use. "Conditional use" means the same as the term is defined in Minnesota Statutes, Chapter 462.

2.720 Deck. "Deck" means a horizontal, unenclosed platform with or without attached railings, seats, trellises, or other features, attached or functionally related to a principal use or site and at any point extending more than three (3) feet above ground.

2.721 Duplex, triplex, and quad. "Duplex," triplex," and "quad" means a dwelling structure on a single lot, having two (2), three (3), and four (4) units, respectively, being attached by common walls and each unit equipped with separate sleeping, cooking, eating, living, and sanitation facilities.

2.722 Dwelling site. "Dwelling site" means a designated location for residential use by one (1) or more persons using temporary or movable shelter, including camping and recreational vehicle sites.

2.723 Dwelling unit. "Dwelling unit" means any structure or portion of a structure, or other shelter designed as short- or long-term living quarters for one (1) or more persons, including rental or timeshare accommodations such as motel, hotel, and resort rooms and cabins.

2.724 Extractive use. "Extractive use" means the use of land for surface or subsurface removal of sand, gravel, rock, industrial minerals, other nonmetallic minerals, and peat not regulated under Minnesota Statutes, Sections 93.44 to 93.51.

2.725 Forest land conversion. "Forest land conversion" means the clear cutting of forested lands to prepare for a new land use other than reestablishment of a subsequent forest stand.

2.726 Guest cottage. "Guest cottage" means a structure used as a dwelling unit that may contain sleeping spaces and kitchen and bathroom facilities in addition to those provided in the primary dwelling unit on a lot.

2.727 Hardship. "Hardship" means the same as that term is defined in Minnesota Statutes, Chapter 462.

2.728 Height of building. "Height of building" means the vertical distance between the highest adjoining ground level at the building or ten (10) feet above the lowest ground level, whichever is lower, and the highest point of a flat roof or average height of the highest gable of a pitched or hipped roof.

2.729 Industrial use. "Industrial use" means the use of land or buildings for the production, manufacture, warehousing, storage, or transfer of goods, products, commodities, or other wholesale items.

2.730 Intensive vegetation clearing. "Intensive vegetation clearing" means the complete removal of trees or shrubs in a contiguous patch, strip, row, or block.

2.731 Lot. "Lot" means a parcel of land designated by plat, metes and bounds, registered land survey, auditors plot, or other accepted means and separated from other parcels or portions by said description for the purpose of sale, lease, or separation.

2.732 Lot width. "Lot width" means the shortest distance between lot lines measured at the midpoint of the building line.

2.733 Nonconformity. "Nonconformity" means any legal use, structure or parcel of land already in existence, recorded, or authorized before the adoption of official controls or amendments thereto that would not have been permitted to become established under the terms of the official controls as now written, if the official controls had been in effect prior to the date it was established, recorded or authorized.

2.734 Ordinary high water level. "Ordinary high water level" means the boundary of public waters and wetlands, and shall be an elevation delineating the highest water level which has been maintained for a sufficient period of time to leave evidence upon the landscape, commonly that point where the natural vegetation changes from predominantly aquatic to predominantly terrestrial. For watercourses, the ordinary high water level is the elevation of the top of the bank of the channel. For reservoirs and flowages, the ordinary high water level is the operating elevation of the normal summer pool.

2.735 Planned unit development. "Planned unit development" means a type of development characterized by a unified site design for a number of dwelling units or dwelling sites on a parcel, whether for sale, rent, or lease, and also usually involving clustering of these units or sites to provide areas of common open space, density increases, and a mix of structure types and land uses. These developments may be organized and operated as condominiums, time-share condominiums, cooperatives, full fee ownership, commercial enterprises, or any combination of these, or cluster subdivisions of dwelling units, residential condominiums, townhouses, apartment buildings, campgrounds, recreational vehicle parks, resorts, hotels, motels, and conversions of structures and land uses to these uses.

2.736 Public waters. "Public waters" means any waters as defined in Minnesota Statutes, Section 103G.005, subdivisions 15 and 15a. However, no lake, pond, or flowage of less than ten (10) acres in size in municipalities and twenty-five (25) acres in size in unincorporated areas need be regulated for the purposes of Minnesota Rules, parts 6120.2500 to 6120.3900. A body of water created by a private user where there was no previous shoreland may, at the discretion of the local government, be exempted from Minnesota Rules, parts 6120.2500 to 6120.3900.

The official determination of the size and physical limits of drainage areas of rivers and streams shall be made by the commissioner.

2.737 Residential planned unit development. "Residential planned unit development" means a use where the nature of residency is nontransient and the major or primary focus of the development is not service-oriented. For example, residential apartments, manufactured home parks, time-share condominiums, townhouses, cooperatives, and full fee ownership residences would be considered as residential planned unit developments. To qualify as a residential planned unit development, a development must contain at least five (5) dwelling units or sites.

2.738 Riparian Lots "Riparian Lot" means a lot adjacent to a lake identified in Section 4.12.

2.739 Semipublic use. "Semipublic use" means the use of land by a private, nonprofit organization to provide a public service that is ordinarily open to some persons outside the regular constituency of the organization.

2.740 Sensitive resource management. "Sensitive resource management" means the preservation and management of areas unsuitable for development in their natural state due to constraints such as shallow soils over groundwater or bedrock, highly erosive or expansive soils, steep slopes, susceptibility to flooding, or occurrence of flora or fauna in need of special protection.

2.741 Setback. "Setback" means the minimum horizontal distance between a structure, sewage treatment system, or other facility and an ordinary high water level, sewage treatment system, top of a bluff, road, highway, property line, or other facility.

2.742 Sewage treatment system. "Sewage treatment system" means a septic tank and soil absorption system or other individual or cluster type sewage treatment system as described and regulated in Minnesota Rules, Chapter 7080.

2.743 Sewer system. "Sewer system" means pipelines or conduits, pumping stations, and force main, and all other construction, devices, appliances, or appurtenances used for conducting sewage or industrial waste or other wastes to a point of ultimate disposal.

2.744 Shore impact zone. "Shore impact zone" means land located between the ordinary high water level of a public water and a line parallel to it at a setback of fifty percent (50%) of the structure setback.

2.745 Shoreland. "Shoreland" means land located within the following distances from public waters: one thousand (1,000) feet from the ordinary high water level of a lake, pond, or flowage; and three hundred (300) feet from a river or stream, or the landward extent of a floodplain designated by ordinance on a river or stream, whichever is greater. The limits of shorelands may be reduced whenever the waters involved are bounded by topographic divides which extend landward from the waters for lesser distances and when approved by the commissioner.

2.746 Significant historic site. "Significant historic site" means any archaeological site, standing structure, or other property that meets the criteria for eligibility to the National Register of Historic Places or is listed in the State Register of Historic Sites, or is determined to be an unplatted cemetery that falls under the provisions of Minnesota Statutes, Section 307.08. A historic site meets these criteria if it is presently listed on either register or if it is determined to meet the qualifications for listing after review by the Minnesota state archaeologist or the director of the Minnesota Historical Society. All unplatted cemeteries are automatically considered to be significant historic sites.

2.747 Steep slope. "Steep slope" means land where agricultural activity or development is either not recommended or described as poorly suited due to slope steepness and the

site's soil characteristics, as mapped and described in available county soil surveys or other technical reports, unless appropriate design and construction techniques and farming practices are used in accordance with the provisions of this Ordinance. Where specific information is not available, steep slopes are lands having average slopes over twelve percent (12%), as measured over horizontal distances of fifty (50) feet or more, that are not bluffs.

2.748 Structure. "Structure" means any building or appurtenance, including decks, except aerial or underground utility lines, such as sewer, electric, telephone, telegraph, gas lines, towers, poles, and other supporting facilities.

2.749 Subdivision. "Subdivision" means land that is divided for the purpose of sale, rent, or lease, including planned unit developments.

2.750 Surface water-oriented commercial use. "Surface water-oriented commercial use" means the use of land for commercial purposes, where access to and use of a surface water feature is an integral part of the normal conductance of business. Marinas, resorts, and restaurants with transient docking facilities are examples of such use.

2.751 Toe of the bluff. "Toe of the bluff" means the lower point of a fifty (50) foot segment with an average slope exceeding eighteen percent (18%).

2.752 Top of the bluff. "Top of the bluff" means the higher point of a fifty (50) foot segment with an average slope exceeding eighteen percent (18%).

2.753 Variance. "Variance" means the same as that term is defined or described in Minnesota Statutes, Chapter 462.

2.754 Water-oriented accessory structure or facility. "Water-oriented accessory structure or facility" means a small, above ground building or other improvement, except stairways, fences, docks, and retaining walls, which, because of the relationship of its use to a surface water feature, reasonably needs to be located closer to public waters than the normal structure setback. Examples of such structures and facilities include boathouses, gazebos, screen houses, fish houses, pump houses, and detached decks.

2.755 Wetland. "Wetland" means a surface water feature classified as a wetland in the United States Fish and Wildlife Service Circular No. 39 (1971 edition).

Section 3. Administration

3.1 Permits Required

3.11 Pursuant to provisions of Ordinances of the City, a permit is required for the construction of buildings or building additions (and including such related activities as construction of decks and signs), the installation and/or alteration of sewage treatment systems, and those grading and filling activities not exempted by Section 5.3. Application for a permit shall be made to the Zoning Administrator on the forms provided. The application shall include the necessary information so that the Zoning

Administrator can determine the site's suitability for the intended use and that a compliant sewage treatment system will be provided.

3.12 A permit authorizing an addition to an existing structure shall stipulate that an identified nonconforming sewage treatment system, as defined by Section 5.8, shall be reconstructed or replaced in accordance with the provisions of this Ordinance.

3.2 Certificate of Zoning Compliance

The Zoning Administrator shall issue a Certificate of Zoning Compliance for each activity requiring a permit as specified in Section 3.1. The Certificate will specify that the use of land conforms to the requirements of this Ordinance. Any use arrangement or construction at variance with that authorized by permit shall be deemed a violation of this Ordinance and shall be punishable as provided in Section 2.3.

3.3 Variances

Variances may only be granted in accordance with Minnesota Statutes, Chapter 462 and the Ordinances of the City. A variance may not circumvent the general purposes and intent of this Ordinance. No variance may be granted that would allow any use that is prohibited in the zoning district in which the subject property is located. Conditions may be imposed in the granting of a variance to insure compliance and to protect adjacent properties and the public interest. In considering a variance request, the City Council must also consider whether the property owner has reasonable use of the land without the variance, whether the property is used seasonally or year-round, whether the variance is being requested solely on the basis of economic considerations, and the characteristics of development on adjacent properties. The provisions granting the variances under the Rogers Zoning Ordinance will govern the granting of variances hereunder.

(1) The City Council shall decide requests for variances in accordance with the procedures under the Rogers Zoning Ordinance governing variances. In addition, the Council shall also consider the characteristics of development on adjacent properties, and no variance shall be granted which the Council determines will or has a tendency to:

(A) Result in the placement of an artificial obstruction which will restrict the passage of storm and flood water in such a manner as to increase the height of flooding, except obstructions approved by the appropriate Watershed District in conjunction with sound floodplain management;

(B) Result in incompatible land uses or which would be detrimental to the protection of surface and ground water supplies;

(C) Be not in keeping with land use plans and planning objectives for the City of Rogers or which will increase or cause danger to life or property; or

(D) Be inconsistent with the objectives of encouraging land uses compatible with the preservation of the natural land forms, vegetation and the marshes and wetlands within the City of Rogers.

(2) No variance shall be granted unless the applicant has submitted a Shoreland Impact Plan as required and set forth in paragraph (d) below. In granting any variance the Council may attach such conditions as it deems necessary to insure compliance with the policy and intent of this Ordinance.

(3) For existing developments, the application for variance must clearly demonstrate whether public sewer or a conforming sewage treatment system is present for the intended use of the property. The variance, if issued, must require connection to available public sewer or, if no public sewer is available, reconstruction of a non-conforming sewage treatment system pursuant to Subsection 5(h) and Subsection 6(c) below, as well as applicable provisions of the Sewer Ordinances of the City.

(d) Landowners or developers desiring to develop land or construct any dwelling or any other artificial obstruction on land located within any shoreland district within the City of Rogers shall first submit a conditional use permit application as regulated by the Rogers Zoning Ordinance and a plan of development, hereinafter referred to as "shoreland impact plan", which shall set forth proposed provisions for sediment control, water management maintenance of landscaped features, and any additional matters intended to improve or maintain the quality of environment.

(1) Such a plan shall set forth proposed changes requested by the applicant and affirmatively disclose what, if any, change will be made in the natural condition of the earth, including loss or change of earth ground cover, destruction of trees, grade changes and its effect, if any, upon streams, water courses and marshes.

(2) The plan shall minimize tree removal, ground cover change, loss of natural vegetation, and grade changes as much as possible, and shall affirmatively provide for the relocation or replanting of as many trees as possible which are proposed to be removed.

(3) The purpose of the shoreland impact plan shall be to eliminate as much as possible potential pollution, erosion, and siltation.

(4) No conditional use permit or shoreland impact plan shall be required for the development of permitted uses or permitted accessory uses contained within the agricultural and residential districts as established by the Rogers Zoning Ordinance, provided that where appropriate all such uses are serviced with public sanitary sewer.

(e) No approval of any development or construction in the Shoreland District can occur until any environmental review program or process required by the

Minnesota Environmental Quality Board such as, but not limited to, the preparation of an Environmental Assessment Worksheet or Environmental Impact Statement is complete.

3.4 Notifications to the Department of Natural Resources

3.41 Copies of all notices of any public hearings to consider variances, amendments, or conditional uses under this Ordinance must be sent to the Commissioner or the Commissioner's designated representative and postmarked at least ten (10) days before the hearings. Notices of hearings to consider proposed subdivisions/plats must include copies of the subdivision/plat.

3.42 A copy of approved amendments and subdivisions/plats, and final decisions granting variances or conditional uses under local shoreland management controls must be sent to the Commissioner or the Commissioner's designated representative and postmarked within ten (10) days of final action. In addition, when a variance is approved after the Department of Natural Resources has formally recommended denial in the hearing record, the notification of the approved variance required in Section 3.41 shall also include the City Council's summary of the public records/testimony and the Findings of Fact and Conclusions which supported the issuance of the variance.

(h) The granting of any permit, variance, or subdivision approval under provisions of this Ordinance shall, in no way, affect the owner's capability or responsibility to obtain the approval required by any other statute, ordinance or legislation of any state agency or subdivision thereof. Approval may be expressly given in conjunction with other permits applied for, but no approval shall be implied from the grant of such permits, nor from the necessity to apply for a permit as described herein.

Section 4. Rogers Shoreland Classification System

4.1 Shoreland Classification System

The public waters of the City of Rogers have been classified below consistent with the criteria found in Minnesota Rules, part 6120.3000, and the public waters inventory map for Hennepin County, Minnesota. Other surface waters affected by this Ordinance, generally having less than ten (10) acres, are classified as wetland systems and thus are regulated under the provisions of the Rogers Wetland Ordinance.

4.11 The shoreland area for the waterbodies listed in Sections 4.12 and 4.13 shall be as defined in Section 2.744 and as shown on the Official Zoning Map.

4.12 Lakes

A.	Natural Environment Lakes Cowley Lake	Public Waters Inventory I.D. # 27-169P
B.	Recreational Development Lakes (None)	Public Waters Inventory I.D. # ----
C.	General Development Lakes (None)	Public Waters Inventory I.D. # ----

4.13 Rivers and Streams

A.	Agricultural Rivers South Fork Crow River	Legal Description Section 16, T120N, R23W
B.	Tributary System Fox Creek	Legal Description Sections 15, 16, 22, 23; T120N; R23W

*All protected watercourses in the City of Rogers shown on the Public Waters Inventory Map for Hennepin County, a copy of which is hereby adopted by reference, not given a classification in Items A-E above shall be considered "Tributary".

4.2 Land Use District Descriptions

4.21 Criteria For Designation.

A. General Considerations and Criteria for All Land Uses:

- (1) preservation of natural areas;
- (2) present ownership and development of shoreland areas;
- (3) shoreland soil types and their engineering capabilities;
- (4) topographic characteristics;
- (5) vegetative cover;
- (6) in-water physical characteristics, values, and constraints;
- (7) recreational use of the surface water;
- (8) road and service center accessibility;

- (9) socioeconomic development needs and plans as they involve water and related land resources;
- (10) the land requirements of industry which, by its nature, requires location in shoreland areas; and
- (11) the necessity to preserve and restore certain areas having significant historical or ecological value.

B. Factors and Criteria for Planned Unit Developments:

- (1) existing recreational use of the surface waters and likely increases in use associated with planned unit developments;
- (2) physical and aesthetic impacts of increased density;
- (3) suitability of lands for the planned unit development approach;
- (4) level of current development in the area; and
- (5) amounts and types of ownership of undeveloped lands.

4.22 Land Use District Descriptions. The land use districts provided below, and the allowable land uses therein for the given classifications of waterbodies, shall be properly delineated on the Official Zoning Map for the shorelands of this community. These land use districts are in conformance with the criteria specified in Minnesota Rules, part 6120.3200, Subp. 1:

A. Land Use Districts For Lakes

	General Development Lakes	Recreational Development Lakes	Natural Environment Lakes
(1) Special Protection District - Uses			
- Forest management	P	P	P
- Sensitive resource management	P	P	P
- Agricultural: cropland and pasture	P	P	P
- Agricultural feedlots	C	C	C
- Parks and historic sites	C	C	C
- Extractive use	C	C	C
- Single residential	C	C	C
- Mining of metallic minerals and peat	P	P	P

	General Development Lakes	Recreational Development Lakes	Natural Environment Lakes
(2) Residential District – Uses			
- Single residential	P	P	P
- Semipublic	C	C	C
- Parks & historic sites	C	C	C
- Extractive use	C	C	C
- Duplex, triplex, quad residential	P	P	C
- Forest management	P	P	P
- Mining of metallic minerals and peat	P	P	P
(3) High Density Residential District – Uses			
- Residential planned unit developments	C	C	C
- Single residential	P	P	P
- Surface water oriented commercial*	C	C	C
- Semipublic	C	C	C
- Parks & historic sites	C	C	C
- Duplex, triplex, quad residential	P	P	P
- Forest management	P	P	P
(4) Water Oriented Commercial District - Uses			
- Surface water-oriented commercial	P	P	C
- Commercial planned unit development**	C	C	C
- Public, semipublic	C	C	C
- Parks & historic sites	C	C	C
- Forest management	P	P	P

*As accessory to a residential planned unit development

**Limited expansion of a commercial planned unit development involving up to six (6) additional dwelling units or sites may be allowed as a permitted use provided the provisions of Section 8.0 are satisfied.

(5) General Use District - Uses			
- Commercial	P	P	C
- Commercial planned unit development**	C	C	C
- Industrial	C	C	N
- Public, semipublic	P	P	C
- Extractive use	C	C	C
- Parks & historic sites	C	C	C
- Forest management	P	P	P
- Mining of metallic minerals and peat	P	P	P

*As accessory to a residential planned unit development

**Limited expansion of a commercial planned unit development involving up to six (6) additional dwelling units or sites may be allowed as a permitted use provided the provisions of Section 8.0 are satisfied.

B. Land Use Districts for Rivers and Streams

	Re- mote	For- ested	Trans- ition	Agri- cultural	Urban	Tribut- ary
(1) Special Protection District – Uses						
- Forest management	P	P	P	P	P	P
- Sensitive resource management	P	P	P	P	P	P
- Agricultural: cropland and pasture	P	P	P	P	P	P
- Agricultural feedlots	C	C	C	C	C	C
- Parks & historic sites	C	C	C	C	C	C
- Extractive use	C	C	C	C	C	C
- Single residential	C	C	C	C	C	C
- Mining of metallic minerals and peat	P	P	P	P	P	P
(2) Residential District – Uses						
- Single residential	P	P	P	P	P	P
- Semipublic	C	C	C	C	C	P
- Parks & historic sites	C	C	C	C	C	P
- Extractive use	C	C	C	C	C	C
- Duplex, triplex, quad residential	C	C	C	C	P	C
- Forest management	P	P	P	P	P	P
- Mining of metallic minerals and peat	P	P	P	P	P	P

*As accessory to a residential planned unit development

**Limited expansion of a commercial planned unit development involving up to six (6) additional dwelling units or sites may be allowed as a permitted use provided the provisions of Section 8.0 are satisfied.

	Re- mote	For- ested	Trans- ition	Agri- cultural	Urban	Tribut ary
(3) High Density Residential – Uses						
- Residential planned unit developments	C	C	C	C	C	C
- Single residential	P	P	P	P	P	P
- Surface water oriented commercial*	C	C	C	C	C	C
- Semipublic	C	C	C	C	C	C

- Duplex, triplex, quad residential	P	P	P	P	P	P
- Forest management	P	P	P	P	P	P
(4) Water-oriented Commercial – Uses						
- Surface water oriented commercial*	C	C	C	C	C	C
- Commercial planned unit development*	C	C	C	C	C	C
- Public, semipublic	C	C	C	P	P	P
- Parks & historic sites	C	C	C	C	C	C
- Forest management	P	P	P	P	P	P
(5) General Use District - Uses						
- Commercial*	C	C	C	C	P	C
- Commercial planned unit development**	C	C	C	C	C	C
- Industrial	N	C	N	N	C	C
- Public, semipublic	C	C	C	C	P	C
- Extractive use	C	C	C	C	C	C
- Parks & historic sites	C	C	C	C	C	C
- Forest management	P	P	P	P	P	P
- Mining of metallic minerals and peat	P	P	P	P	P	P

*As accessory to a residential planned unit development

**Limited expansion of a commercial planned unit development involving up to six (6) additional dwelling units or sites may be allowed as a permitted use provided the provisions of Section 8.0 are satisfied.

4.23 Use and Upgrading of Inconsistent Land Use Districts.

A. The land use districts adopted in Ordinance Number _____, Section _____, as they apply to shoreland areas, and their delineated boundaries on the Official Zoning Map, are not consistent with the land use district designation criteria specified in Section 4.22. These inconsistent land use district designations may continue until revisions are proposed to change either the land use district designation within an existing land use district boundary shown on the Official Zoning Map or to modify the boundary of an existing land use district shown on the Official Zoning Map.

B. When a revision is proposed to an inconsistent land use district provision, the following additional criteria and procedures shall apply:

(1) For Lakes. When a revision to a land use district designation on a lake is considered, the land use district boundaries and use provisions therein for all the shoreland areas within the jurisdiction of this Ordinance on said lake must be revised to make them substantially compatible with the framework in Sections 4.21 and 4.22.

(2) For Rivers and Streams. When a revision to a land use district designation on a river or stream is proposed, the land use district boundaries and the use provisions therein for all shoreland on both sides of the river or stream within the same classification within the jurisdiction of this Ordinance must be revised to make them substantially compatible with the framework in Sections 4.21 and 4.22. If the same river classification is contiguous for more than a five (5) mile segment, only the shoreland for a distance of 2.5 miles upstream and downstream, or to the class boundary if closer, need be evaluated and revised.

C. When an interpretation question arises about whether a specific land use fits within a given "use" category, the interpretation shall be made by the Board of Adjustment. When a question arises as to whether a land use district's boundaries are properly delineated on the Official Zoning Map, this decision shall be made by the City Council.

D. When a revision is proposed to an inconsistent land use district provision by an individual party or landowner, this individual party or landowner will only be responsible to provide the supporting and/or substantiating information for the specific parcel in question. The City Council will direct the Zoning Administrator to provide such additional information for this waterbody as is necessary to satisfy Items A and B.

E. The City Council must make a detailed finding of fact and conclusion when taking final action that this revision, and the upgrading of any inconsistent land use district designations on said waterbody, are consistent with the enumerated criteria and use provisions of Section 4.2.

Section 5. Zoning and Water Supply/Sanitary Provisions

5.1 Lot Area and Width Standards

The lot area (in square feet) and lot width standards (in feet) for single, duplex, triplex and quad residential lots created after the date of enactment of this Ordinance for the lake and river/stream classifications are the following:

5.11 Unsewered Lakes

A. Natural Environment:

	Riparian lots		Nonriparian Lots	
	Area	Width	Area	Width
Single	80,000	200	80,000	200
Duplex	120,000	300	160,000	400
Triplex	160,000	400	240,000	600
Quad	200,000	500	320,000	800

B. Recreational Development:

	Riparian lots		Nonriparian Lots	
	Area	Width	Area	Width
Single	40,000	150	40,000	150
Duplex	80,000	225	80,000	265
Triplex	120,000	300	120,000	375
Quad	160,000	375	160,000	490

C. General Development:

	Riparian lots		Nonriparian Lots	
	Area	Width	Area	Width
Single	20,000	100	40,000	150
Duplex	40,000	180	80,000	265
Triplex	60,000	260	120,000	375
Quad	80,000	340	160,000	490

5.12 Sewered Lakes:

A. Natural Environment:

	Riparian lots		Nonriparian Lots	
	Area	Width	Area	Width
Single	40,000	125	20,000	125
Duplex	70,000	225	35,000	220
Triplex	100,000	325	52,000	315
Quad	130,000	425	65,000	410

B. Recreational Development:

	Riparian lots		Nonriparian Lots	
	Area	Width	Area	Width
Single	20,000	100	15,000	100
Duplex	35,000	135	26,000	135
Triplex	50,000	195	38,000	190
Quad	65,000	255	49,000	245

C. General Development:

	Riparian lots		Nonriparian Lots	
	Area	Width	Area	Width
Single	15,000	100	10,000	100
Duplex	26,000	135	17,500	135
Triplex	38,000	195	25,000	190
Quad	49,000	255	32,500	245

5.13 River/Stream Lot Width Standards. The following chart sets forth the minimum lot area requirements of the classification stated in Section 4 above.

Minimum Lot Size Above High Water Mark		Tributary Streams
(A)	Non-sewered, abutting stream	1 acre
(B)	Sewered, abutting or non-abutting stream	
(i)	Single Family	15,000 sq. ft.
(ii)	Duplex	26,000 sq. ft.
(iii)	Triplex	38,000 sq. ft.
(iv)	Quad	49,000 sq. ft.

The lot width standards for single, duplex, triplex and quad residential developments for the six (6) river/stream classifications are:

	Agricultural	Tributary	
		No Sewer	Sewer
Single	150	100	100
Duplex	225	150	180
Triplex	300	200	260
Quad	375	250	340

5.14 Additional Special Provisions.

A. Residential subdivisions with dimensional standards that vary from those in the tables in Sections 5.11 to 5.13 can only be allowed if designed and approved as residential planned unit developments under Section 8.0.

Only land above the ordinary high water level of public waters can be used to meet lot area standards, and lot width standards must be met at both the ordinary high water level and at the building line. The sewer lot area dimensions in Section 5.12 can only be used if publicly owned sewer system service is available to the property.

B. Subdivisions of duplexes, triplexes, and quads on Natural Environment Lakes must also meet the following standards:

- (1) each building must be set back at least two hundred (200) feet from the ordinary high water level;
- (2) each building must have common sewage treatment and water systems in one (1) location and serve all dwelling units in the building;

(3) watercraft docking facilities for each lot must be centralized in one (1) location and serve all dwelling units in the building; and

(4) no more than twenty-five percent (25%) of a lake's shoreline can be in duplex, triplex, or quad developments.

C. One (1) guest cottage may be allowed on lots meeting or exceeding the duplex lot area and width dimensions presented in Sections 5.11-5.13, provided the following standards are met:

(1) for lots exceeding the minimum lot dimensions of duplex lots, the guest cottage must be located within the smallest duplex-sized lot that could be created including the principal dwelling unit;

(2) a guest cottage must not cover more than seven hundred (700) square feet of land surface and must not exceed fifteen (15) feet in height; and

(3) a guest cottage must be located or designed to reduce its visibility as viewed from public waters and adjacent shorelands by vegetation, topography, increased setbacks or color, assuming summer leaf-on conditions.

D. Lots intended as controlled accesses to public waters or as recreation areas for use by owners of nonriparian lots within subdivisions shall require a conditional use permit and must meet or exceed the following standards:

(1) they must meet the width and size requirements for residential lots, and be suitable for the intended uses of controlled access lots.

(2) if docking, mooring, or over-water storage of more than six (6) watercraft is to be allowed at a controlled access lot, then the width of the lot (keeping the same lot depth) must be increased by the percent of the requirements for riparian residential lots for each watercraft beyond six (6), consistent with the following table:

Controlled Access Lot Frontage Requirements

Ratio of lake size to shore length (acres/mile)	Required increase in frontage (percent)
Less than 100	25
100-200	20
201-300	15
301-400	10
Greater than 40	5

(3) persons desiring to plat or develop such lots shall submit with a subdivision or other development application a proposed docking, launching and/or mooring plan, which plan shall set forth therein all such facilities to be used by the landowners within the proposed development.

(i) Such plan shall set forth the location and size of the proposed docking, launching and/or mooring facilities to be used by the landowners within the proposed development.

(ii) No such facility shall be constructed upon waters or upon land contiguous thereto when the usage of such facilities is to be by the owner of land which land has been developed or platted subsequent to June 1, 1994 without the said facilities having been approved by the City Council

(iii) The City Council shall, before granting approval of any such facilities, consider the watercraft use density of the area and shall make a finding that the approval of such facilities does not disproportionately increase average watercraft use density found on other shoreland properties in the area.

(iv) This subparagraph (b) shall not apply to a riparian single-family lot separately owned and not subject to a public walkway or trail easement adjacent to the shoreline.

(4) they must be jointly owned by all purchasers of lots in the subdivision or by all purchasers of nonriparian lots in the subdivision who are provided riparian access rights

(5) covenants or other equally effective legal instruments must be developed that specify which lot owners have authority to use the access lot and what activities are allowed. The activities may include watercraft launching, loading, storage, beaching, mooring, or docking. They must also include other outdoor recreational activities that do not significantly conflict with general public use of the public water or the enjoyment of normal property rights by adjacent property owners. Examples of the nonsignificant conflict activities include swimming, sunbathing, or picnicking. The covenants must limit the total number of vehicles allowed to be parked and the total number of watercraft allowed to be continuously moored, docked, or stored over water, and must require centralization of all common facilities and activities in the most suitable locations on the lot to minimize topographic and vegetation alterations. They must also require all parking areas, storage buildings, and other facilities to be screened by vegetation or topography as much as practical from view from the public water, assuming summer, leaf-on conditions.

5.2 Placement, Design, and Height of Structures

5.21 Placement of Structures on Lots. When more than one (1) setback applies to a site, structures and facilities must be located to meet all setbacks. Where structures exist on the adjoining lots on both sides of a proposed building site, structure setbacks may be altered without a variance to conform to the adjoining setbacks from the ordinary high water level, provided the proposed building site is not located in a shore impact zone or in a bluff impact zone. Structures shall be located as follows:

A. Structure and On-site Sewage System Setbacks (in feet) from Ordinary High Water Level*.

Setbacks*				
Classes of Public Waters	Structures Unsewered	Sewered	Sewage Treatment System	Setback from Top of Bluff (feet)
Lakes				
Natural Environment	150	150	150	30
Recreational Development	100	75	75	30
General Development	75	50	50	30
Rivers				
Agriculture and Tributary	100	50	75	30

*One (1) water-oriented accessory structure designed in accordance with Section 5.22 may be set back a minimum distance of ten (10) feet from the ordinary high water level.

B. Additional Structure Setbacks. The following additional structure setbacks apply, regardless of the classification of the waterbody:

	Setback From:	Setback (in feet)
(1)	Top of bluff;	30
(2)	Unplatted cemetery	50
(3)	Right-of-way line of federal, state, or county highway; and	50
(4)	Right-of-way line of town road, public street, or other roads or streets not classified.	30

Frontyard and sideyard setbacks shall conform with the Regulations for the Zoning District in which the property is located.

C. High Water Elevations. Structures must be placed in accordance with any floodplain regulations applicable to the site. The elevation to which the lowest floor, including basement, is placed or flood-proofed must be determined as follows:

(1) for lakes, by placing the lowest floor at a level at least three feet above the highest known water level, or three feet above the ordinary high water level, whichever is higher;

(2) for rivers and streams, by placing the lowest floor at least three feet above the flood of record, if data are available. If data are not available, by placing the lowest floor at least three feet above the ordinary high water level, or by conducting a technical evaluation to determine effects of proposed construction upon flood stages and flood flows and to establish a flood protection elevation. Under all three approaches, technical evaluations must be done by a qualified engineer or hydrologist consistent with parts 6120.5000 to 6120.6200 governing the management of flood plain areas. If more than one approach is used, the highest flood protection elevation determined must be used for placing structures and other facilities; and

(3) water-oriented accessory structures may have the lowest floor placed lower than the elevation determined in this item if the structure is constructed of flood-resistant materials to the elevation, electrical and mechanical equipment is placed above the elevation and, if long duration flooding is anticipated, the structure is built to withstand ice action and wind-driven waves and debris.

D. Height. All structures in residential districts in cities, except churches and nonresidential agricultural structures, must not exceed thirty-five (35) feet in height.

E. Accessory structures and facilities. All accessory structures and facilities, except those that are water-oriented, must meet or exceed structure setback standards. Each residential lot may have one (1) water-oriented accessory structure or facility located closer to public waters than the structure setback if all of the following standards are met:

(1) The structure or facility must not exceed ten (10) feet in height, exclusive of safety rails, and cannot occupy an area greater than two hundred fifty (250) square feet. Detached decks must not exceed eight (8) feet above grade at any point.

(2) The setback of the structure or facility from the ordinary high water level must be at least ten (10) feet.

(3) The structure or facility must be treated to reduce visibility as viewed from public waters and adjacent shorelands by vegetation, topography, increased setbacks, color, or other means acceptable to the local unit of government, assuming summer, leaf-on conditions.

(4) The roof may be used as a deck with safety rails, but must not be enclosed or used as a storage area.

(5) The structure or facility must not be designed or used for human habitation and must not contain water supply or sewage treatment facilities.

(6) As an alternative for general development and recreational development waterbodies, water-oriented accessory structures used solely for watercraft storage, and including storage of related boating and water-oriented sporting equipment, may occupy an area up to four hundred (400) square feet provided the maximum width of the structure is twenty (20) feet as measured parallel to the configuration of the shoreline.

(7) Any accessory structures or facilities not meeting the above criteria, or any additional accessory structures or facilities must meet or exceed structure setback standards.

F. Bluff Impact Zones. Structures and accessory facilities, except stairways and landings, must not be placed within bluff impact zones, and no structure shall be placed within thirty (30) feet of the top of a bluff.

G. Uses Without Water-oriented Needs. Uses without water-oriented needs must be located on lots or parcels without public waters frontage, or, if located on lots or parcels with public waters frontage, must either be set back double the normal ordinary high water level setback or be substantially screened from view from the water by vegetation or topography, assuming summer, leaf-on conditions.

(1) Structures must be placed in accordance with any floodplain and wetland Regulations applicable to the site. The following structures, improvements, materials and uses are prohibited and will not be approved in shoreland setback areas unless otherwise specifically allowed pursuant to some other provision of the Ordinances of the City.

- (A) Houses, runs and pens for animals.
- (B) Ice or fish houses.
- (C) Storage sheds or buildings.
- (D) Fences.
- (E) Decks or platforms, the main surface of which at any one (1) point is more than six (6) inches above the surface of the ground.
- (F) Open storage, debris or junk
- (G) Boat storage or launching facilities, except as an integral part of a dock or pier that otherwise complies with the terms of the Ordinances of the City. Boat storage or launching facilities may not be enclosed and must be exposed to the elements from all directions.

H. Stairways, Lifts, and Landings. Stairways and lifts are the preferred alternative to major topographic alterations for achieving access up and down bluffs and steep slopes to shore areas. Stairways and lifts must meet the following design requirements:

- (1) wood, open stairway construction, stained or painted in earth tones, or otherwise treated so as to blend with the natural surroundings of the setback area.
- (2) Stairways, lifts, and landings may either be constructed above the ground on posts or pilings or installed directly into the ground or hillside wherever reasonably possible, provided they are designed and built in a manner that ensures control of soil erosion.
- (3) Steps no wider than four(4) feet on residential lots. Wider stairways may be used for commercial properties, public open-space recreational properties, and planned unit developments;
- (4) landings for stairways and lifts on residential lots must not exceed thirty-two (32) square feet in area. Landings larger than thirty-two (32) square feet may be used for commercial properties, public open-space recreational properties, and planned unit developments;
- (5) built in compliance with the City's Building Code;

- (6) canopies or roofs are not allowed on stairways or landings;
- (7) stairways, lifts, and landings must be located in the most visually inconspicuous portions of lots, as viewed from the surface of the public water assuming summer, leaf-on conditions, whenever practical; and
- (8) facilities such as ramps, lifts, or mobility paths for physically handicapped persons are also allowed for achieving access to shore areas, provided that the dimensional and performance standards of subparagraphs (1) to (7) are complied with in addition to the requirements of Minnesota Rules, Chapter 1341.

I. Any concrete, blacktop, or other non-porous walkway, driveway, or double-track vehicle access having a total width of more than five (5) feet, except that this prohibition shall not apply to public improvements.

J. Gazebos, screen houses, pump houses.

K. Any other structure, improvement, material or use that does not provide the property owner with access to and from lake waters, or that would tend to pollute or otherwise make dangerous the waters of a rising lake as debris or otherwise, or might otherwise be a threat to the public's health, safety or welfare.

L. Additions for decks, uncovered porches or patios shall be subject to the following setbacks:

(1) All decks, uncovered porches or patios added to homes built after June 1, 1994, shall comply with aforementioned setbacks.

(2) All decks, uncovered porches or patios that may encroach into required setback areas if added to homes built before June 1, 1994, will be considered subject to the following:

(A) Deck encroachments stream-ward beyond the existing building line will be considered only after all other alternative locations and designs have been evaluated and found to be impractical;

(B) The maximum allowable deck, uncovered porch, or patio lakeward of the building line shall not exceed fifteen percent (15%) of the structure's existing setback from the ordinary high water level or does not encroach closer than thirty (30) feet whichever is more restrictive. The minimum setback, however, for any deck, uncovered porch or patio shall be no less than fifty percent (50%) of the required setback distance for tributary streams.

(C) Any deck, uncovered porch or patio that is constructed closer than the required setback from the Normal Ordinary Water Elevation shall be constructed of wood and be stained or painted in earth

tones, or otherwise treated so as to blend with the natural surroundings of the setback area.

- (D) Decks, porches or patios shall not be screened in or roofed under any circumstances.

M. Proximity to Unplatted Cemeteries and Significant Historic Sites. No structure may be placed nearer than fifty (50) feet from the boundary of an unplatted cemetery protected under Minnesota Statutes, Section 307.08 unless necessary approval is obtained from the Minnesota State Archeologist's office. No structure may be placed on a significant historic site in a manner that affects the values of the site unless adequate information about the site has been removed and documented in a public repository.

N. Steep Slopes. The Zoning Administrator must evaluate possible soil erosion impacts and development visibility from public waters before issuing a permit for construction of sewage treatment systems, roads, driveways, structures, or other improvements on steep slopes. When determined necessary, conditions must be attached to issued permits to prevent erosion and to preserve existing vegetation screening of structures, vehicles, and other facilities as viewed from the surface of public waters, assuming summer, leaf-on vegetation. No structure shall be placed in any area which will require grading and/or filling which will result in impairment of public waters by reason of erosion and sedimentation, violate provisions of Statewide Standards and Criteria for Management of Flood Plain Areas of Minnesota, or result in impairment of fish or aquatic life.

O. Unless otherwise provided, any structure, improvement, material or use for which a permit or other review or permission is not already required elsewhere in the Ordinances of the City shall require a permit from the Zoning Administrator prior to the placement or construction thereof in any setback area required by this Ordinance. Application for such a permit shall be made in writing by the property owner and delivered to the City's Administrator.

- (1) The application shall include a description of the proposed structure, improvement, material or use in sufficient detail so as to enable the Zoning Administrator to assess compliance with this Ordinance or lack thereof.

- (2) The Zoning Administrator may request such additional information from the applicant as is necessary to review the application and may require the applicant to modify the proposal as a condition to receiving a permit or may refuse to issue a permit if the proposal is contrary to this Ordinance.

5.3 Shoreland Alterations

Alterations of vegetation and topography will be regulated to prevent erosion into public waters, fix nutrients, preserve shoreland aesthetics, preserve historic values, prevent bank slumping, and protect fish and wildlife habitat.

5.31 Vegetation Alterations.

A. Vegetation alteration necessary for the construction of structures, public trails, sewage treatment systems, roads and parking areas regulated by Subsection 5(d) below are exempt from the vegetation alteration standards that follow.

B. Removal or alteration of vegetation, except for agricultural uses as regulated in Sections 5.62 and 5.63, is allowed subject to the following standards:

(1) Intensive vegetation clearing within the shore and bluff impact zones and on steep slopes is not allowed. Intensive vegetation clearing for forest land conversion to another use outside of these areas is allowable as a conditional use if an erosion control and sedimentation plan is developed and approved by the soil and water conservation district in which the property is located.

(2) In shore impact and bluff impact zones and on steep slopes, limited clearing of trees and shrubs and cutting, pruning, and trimming of trees is allowed to provide a view to the water from the principal dwelling site and to accommodate the placement, if allowed, of stairways and landings, picnic areas, access paths, livestock watering areas, beach and watercraft access areas, and permitted structures or facilities, provided that:

(a) the screening of structures, vehicles, or other facilities as viewed from the water, assuming summer, leaf-on conditions, is not substantially reduced;

(b) along rivers, existing shading of water surfaces is preserved; and

(c) the above provisions are not applicable to the removal of trees, limbs, or branches that are dead, diseased, or pose safety hazards nor are they meant to prevent normal and ordinary lawn maintenance.

(d) Natural vegetation shall be restored insofar as feasible after any construction project.

(3) Use of fertilizer and pesticides in the shoreland management district must be done in such a way as to minimize runoff into the shore impact zone or public water by the use of earth, vegetation, or both.

5.32 Topographic Alterations/Grading and Filling.

A. Grading and filling and excavations necessary for construction of structures, driveways and sewage treatment systems under validly issued permits do not require the issuance of a separate grading and filling permit unless otherwise required pursuant to any other Ordinance of the City. However, the grading and filling standards in this Ordinance must be incorporated into the issuance of permits for construction of structures, driveways and sewage treatment systems.

- B. Public roads and parking areas are regulated by Section 5.4.
- C. Notwithstanding Items A and B above, a grading and filling permit will be required for:
- (1) the movement of more than ten (10) cubic yards of material on steep slopes or within shore or bluff impact zones.
 - (2) the movement of more than fifty (50) cubic yards of material outside of steep slopes and shore and bluff impact zones.
- D. The following considerations and conditions must be adhered to during the issuance of construction permits, grading and filling permits, conditional use permits, variances and subdivision approvals:
- (1) The provisions of the Rogers Wetlands Ordinance.
 - (2) Alterations must be designed and conducted in a manner that ensures only the smallest amount of bare ground is exposed for the shortest time possible.
 - (3) Mulches or similar materials must be used, where necessary, for temporary bare soil coverage, and a permanent vegetation cover such as sod must be established as soon as possible.
 - (4) Methods to minimize soil erosion and to trap sediments before they reach any surface water feature must be used.
 - (5) Altered areas must be established to acceptable erosion control standards consistent with the field office technical guide of the local soil and water conservation districts and the United States Soil Conservation Service.
 - (6) Fill or excavated material must not be placed in a manner that creates an unstable slope.
 - (7) Plans to place fill or excavated material on steep slopes must be reviewed by the City Engineer for continued slope stability and must not create finished slopes of thirty percent (30%) or greater.
 - (8) Fill shall not restrict a floodway or destroy the storage capacity of a flood plain. Fill or excavated material must not be placed in bluff impact zones or in areas lower in elevation than the normal high water mark.
 - (9) Any alterations below the ordinary high water level of public waters must first be authorized by the commissioner under Minnesota Statutes, Section 103G.245;

No grading or filling shall be permitted within twenty (20) feet of the normal high water mark of a water body. Notwithstanding the foregoing, grading or filling in

connection with the following improvements may be made within said twenty (20) feet so long as any permit required for the improvement has first been issued; beaches, landscaping for slope stabilization, erosion protection, installation of public or private utilities, and public improvements.

(10) Alterations of topography must only be allowed if they are accessory to permitted or conditional uses and do not adversely affect adjacent or nearby properties; and

(11) Placement of natural rock riprap, including associated grading of the shoreline and placement of a filter blanket, is permitted if the finished slope does not exceed three (3) feet horizontal to one (1) foot vertical, the landward extent of the riprap is within ten (10) feet of the ordinary high water level, and the height of the riprap above the ordinary high water level does not exceed three (3) feet. Such riprap shall not be permitted solely for decorative purposes.

E. Connections to public waters.

(1) Any work which will change or diminish the course, current, or cross section of a public water must be approved by the Minnesota Department of Natural Resources and City of Rogers before the work is begun. This includes construction of channels and ditches, lagooning, dredging of stream bottoms for the removal of muck, silt or weeds, and filling in the bed, including low lying marsh areas. Approval shall be construed to mean the issuance of a conditional use permit by the City of Rogers and the issuance by the Commissioner of Natural Resources of a permit pursuant to Minnesota Statutes, Section 103G.315 and other related statutes.

(2) Excavation on shorelands where the intended purpose is connection to a public water, such as boat slips, canals, lagoons, and harbors, shall require a permit from the City Engineer prior to commencement of construction. Such permit shall be obtained only after the Commissioner of Natural Resources has approved the proposed connection to public waters. Approval will be given only if the proposed work is consistent with applicable state Regulations for work in beds of public waters.

5.4 Placement and Design of Roads, Driveways, and Parking Areas

5.41 Public and private roads and parking areas must be designed to take advantage of natural vegetation and topography to achieve maximum screening from view from public waters. Documentation must be provided by an architect, landscape architect, or a civil engineer, anyone of which must be registered with the State of Minnesota, that all roads and parking areas are designed and constructed to minimize and control erosion to public waters consistent with the field office technical guides of the local soil and water conservation district, or other applicable technical materials. Parking areas of more than four (4) spaces shall be screened in accordance with a landscaping plan submitted and approved by the City Council.

5.42 Roads, driveways, and parking areas must meet structure setbacks and must not be placed within bluff and shore impact zones, when other reasonable and feasible placement alternatives exist. If no alternatives exist, they may be placed within these areas, and must be designed to minimize adverse impacts.

5.43 Public and private watercraft access ramps, approach roads, and access-related parking areas may be placed within shore impact zones provided the vegetative screening and erosion control conditions of this Section 5 are met. For private facilities, the grading and filling provisions of Section 5.32 above must be met.

5.44 The provisions of Section 5.4 do not apply to public trails.

5.5 Stormwater Management

The following general and specific standards shall apply:

5.51 General Standards:

A. When possible, existing natural drainageways, wetlands, and vegetated soil surfaces must be used to convey, store, filter, and retain stormwater runoff before discharge to public waters.

B. Development must be planned and conducted in a manner that will minimize the extent of disturbed areas, runoff velocities, erosion potential, and reduce and delay runoff volumes. Disturbed areas must be stabilized and protected as soon as possible and facilities or methods used to retain sediment on the site.

C. When development density, topographic features, and soil and vegetation conditions are not sufficient to adequately handle stormwater runoff using natural features and vegetation, various types of constructed facilities such as diversions, settling basins, skimming devices, dikes, waterways, and ponds may be used. Preference must be given to designs using surface drainage, vegetation, and infiltration rather than buried pipes and man-made materials and facilities.

5.52 Specific Standards:

A. Impervious surface coverage of lots must not exceed twenty-five percent (25%) of the lot area.

B. When constructed facilities are used for stormwater management, documentation must be provided by a qualified individual that they are designed and installed consistent with the field office technical guide of the local soil and water conservation districts.

C. New constructed stormwater outfalls to public waters must provide for filtering or settling of suspended solids and skimming of surface debris before discharge.

5.6 Special Provisions for Commercial, Industrial, Public/Semipublic, Agricultural, Forestry and Extractive Uses and Mining of Metallic Minerals and Peat

5.61 Standards for Commercial, Industrial, Public, and Semipublic Uses.

A. Surface water-oriented commercial uses and industrial uses with similar needs are prohibited. Commercial uses and industrial uses without water-oriented needs must be located on lots or parcels without public waters frontage, or, if frontage, must either be set back double the normal ordinary high water level setback or be substantially screened, blended or camouflaged from view from the water by vegetation, topography, or architecture, assuming summer, leaf-on conditions. Those uses with water-oriented needs must meet the following standards:

(1) in addition to meeting impervious coverage limits, setbacks, and other zoning standards in this Ordinance, the uses must be designed to incorporate topographic and vegetative screening of parking areas and structures;

(2) uses that require short-term watercraft mooring for patrons must centralize these facilities and design them to avoid obstructions of navigation and to be the minimum size necessary to meet the need; and

(3) uses that depend on patrons arriving by watercraft may use signs and lighting to convey needed information to the public, subject to the following general standards:

(a) no advertising signs or supporting facilities for signs may be placed in or upon public waters. Signs conveying information or safety messages may be placed in or on public waters by a public authority or under a permit issued by the county sheriff;

(b) signs may be placed, when necessary, within the shore impact zone if they are designed and sized to be the minimum necessary to convey needed information. They must only convey the location and name of the establishment and the general types of goods or services available. The signs must not contain other detailed information such as product brands and prices, must not be located higher than ten (10) feet above the ground, and must not exceed thirty-two (32) square feet in size. If illuminated by artificial lights, the lights must be shielded or directed to prevent illumination out across public waters; and

(c) other outside lighting may be located within the shore impact zone or over public waters if it is used primarily to illuminate potential safety hazards and is shielded or otherwise directed to prevent direct illumination out across public waters. This does not preclude use of navigational lights.

B. Uses without water-oriented needs must be located on lots or parcels without public waters frontage, or, if located on lots or parcels with public waters frontage, must

either be set back double the normal ordinary high water level setback or be substantially screened from view from the water by vegetation or topography, assuming summer, leaf-on conditions.

5.62 Agriculture Use Standards.

A. General cultivation farming, grazing, nurseries, horticulture, truck farming, sod farming, and wild crop harvesting are permitted uses if steep slopes and shore and bluff impact zones are maintained in permanent vegetation or operated under an approved conservation plan (Resource Management Systems) consistent with the field office technical guides of the local soil and water conservation districts or the United States Soil Conservation Service, as provided by a qualified individual or agency. The shore impact zone for parcels with permitted agricultural land uses is equal to a line parallel to and fifty (50) feet from the ordinary high water level.

B. Animal feedlots must meet the following standards:

(1) new feedlots must not be located in the shoreland of watercourses or in bluff impact zones and must meet a minimum setback of three hundred (300) feet from the ordinary high water level of all public waters basins; and

(2) modifications or expansions to existing feedlots that are located within three hundred (300) feet of the ordinary high water level or within a bluff impact zone are allowed if they do not further encroach into the existing ordinary high water level setback or encroach on bluff impact zones.

(3) A certificate of compliance, interim permit, or animal feedlot permit, when required by Minnesota Rules, parts 7020.0100 to 7020.1900, must be obtained by the owner or operator of an animal feedlot.

5.63 Forest Management Standards.

A. The harvesting of timber and associated reforestation must be conducted consistent with the provisions of the Minnesota Nonpoint Source Pollution Assessment-Forestry and the provisions of Water Quality in Forest Management "Best Management Practices in Minnesota."

B. Forest land conversion to another use requires issuance of a conditional use permit and adherence to the following standards

(1) shore and bluff impact zones must not be intensively cleared of vegetation; and

(2) an erosion and sediment control plan is developed and approved by the local soil and water conservation district before issuance of a conditional use permit for the conversion.

C. Use of fertilizer, pesticides, or animal wastes within shorelands must be done in such a way as to minimize impact on the shore impact zone or public water by proper application or use of earth or vegetation

5.64 Extractive Use Standards.

A. Site Development and Restoration Plan. An extractive use site development and restoration plan must be developed, approved, and followed over the course of operation of the site. The plan must address dust, noise, possible pollutant discharges, hours and duration of operation, and anticipated vegetation and topographic alterations. It must also identify actions to be taken during operation to mitigate adverse environmental impacts, particularly erosion, and must clearly explain how the site will be rehabilitated after extractive activities end.

B. Setbacks for Processing Machinery. Processing machinery must be located consistent with setback standards for structures from ordinary high water levels of public waters and from bluffs.

5.65 Mining of Metallic Minerals and Peat. Mining of metallic minerals and peat, as defined in Minnesota Statutes, Sections 93.44 to 93.51, shall be a permitted use provided the provisions of Minnesota Statutes, Sections 93.44 to 93.51, are satisfied.

5.7 Conditional Uses

Conditional uses allowable within shoreland areas shall be subject to the review and approval procedures, and criteria and conditions for review of conditional uses established community-wide. The following additional evaluation criteria and conditions apply within shoreland areas and are in addition to the requirements of the procedures relating to conditional use permits in the Rogers Zoning Ordinance:

5.71 Evaluation criteria. A thorough evaluation of the waterbody and the topographic, vegetation, and soils conditions on the site must be made to ensure:

- (1) the prevention of soil erosion or other possible pollution of public waters, both during and after construction;
- (2) the visibility of structures and other facilities as viewed from public waters is limited;
- (3) the site is adequate for water supply and on-site sewage treatment if public sewer or water are not available; and
- (4) the types, uses, and numbers of watercraft that the project will generate are compatible in relation to the suitability of public waters to safely accommodate these watercraft.

5.72 Conditions attached to conditional use permits. The City Council, upon consideration of the criteria listed above and the purposes of this Ordinance, shall attach such conditions to the issuance of the conditional use permits as it deems necessary to fulfill the purposes of this Ordinance. Such conditions may include, but are not limited to, the following:

- (1) increased setbacks from the ordinary high water level;
- (2) limitations on the natural vegetation to be removed or the requirement that additional vegetation be planted;
- (3) special provisions for the location, design, and use of structures, sewage treatment systems, watercraft launching and docking areas, and vehicle parking areas;
- (4) connection to public sewer and water if available.

5.8 Water Supply and Sewage Treatment

5.81 Water Supply. Any public or private supply of water for domestic purposes must meet or exceed standards for water quality of the Minnesota Department of Health and the Minnesota Pollution Control Agency.

5.82 Sewage treatment. Any premises used for human occupancy must be provided with an adequate method of sewage treatment disposal to be maintained in accordance with acceptable practices and, as follows:

A. Publicly-owned sanitary sewer collection and treatment facilities must be used where available and where feasible.

B. All private sewage treatment systems in the "S", Shoreland District must meet or exceed the Minnesota Pollution Control Agency's standards for individual sewage treatment systems contained in the document titled, "Individual Sewage Treatment Systems Standards, Chapter 7080", a copy of which is hereby adopted by reference and declared to be a part of this Ordinance.

C. Placement of septic tank soil absorption systems/on-site sewage treatment systems shall be subject to the following setback requirements where soil conditions are adequate and where public sewer is not available:

Sewage Treatment System Setback Standards	
Class	Setback From Ordinary High Water Level (Feet)
Natural Environment	150
Recreational Development	75
General Development	50
Agricultural River Segments	75
Tributary River Segments	75

D. A septic tank-drain field system shall be the only acceptable system for installation where public sewer is not available unless it can be demonstrated that this system is not feasible on the particular lot in question and it can be demonstrated that the system being proposed as an alternative will not cause a pollution problem.

E. No person, firm or corporation shall install, alter, repair or extend any individual sewer disposal system without first obtaining a permit therefore from the Building Official for the specific installation, alteration, repair or extension.

F. Location and installation of a septic and soil absorption system (where public sewer is not available) shall be such that, with reasonable maintenance, it will function in a sanitary manner and will not create a nuisance, endanger the quality of any domestic water supply, or pollute or contaminate any waters of the state. If the determination of a site's suitability cannot be made with publicly available existing information, it shall then be the responsibility of the applicant to provide sufficient soil borings and percolation tests from on-site field investigations. In determining a suitable location for the system, consideration shall be given to the following:

- (1) the size and shape of the lot;
- (2) slope of natural and finished grade;
- (3) soil conditions, properties, and permeability;
- (4) high ground water elevation;
- (5) geology;
- (6) proximity to existing or future water supplies;
- (7) depth to the highest known or calculated ground water table or bedrock;
- (8) accessibility for maintenance;

- (9) the existence of lowlands, local surface depressions, and rock outcrops; and
- (10) possible expansion of the system.

G. Soil absorption systems shall not be allowed in the following areas for disposal of domestic sewage:

- (1) low swampy areas or areas subject to recurrent floodings;
- (2) areas where the highest known ground water table, bedrock or impervious soils conditions are within four (4) feet of the bottom of the system; and
- (3) areas of ground slope will create a danger of seepage of the effluent onto the surface of the ground.

H. Nonconforming sewage treatment systems shall be regulated and upgrading in accordance with Section 6.3.

Section 6. Nonconformities

All legally established nonconformities as of the date of this Ordinance may continue nonconforming lots, structures, and uses shall be governed by the provisions of the Rogers Zoning Ordinance that govern such matters. In addition, the following standards will also apply in shoreland areas. Where there is a conflict between this Ordinance and the Rogers Zoning Ordinance, the conflict shall be resolved in such a manner that will tend to eliminate or bring into compliance the nonconformity.

6.1 Construction on Nonconforming Lots of Record

A. Lots of record in the office of the county recorder on the date of enactment of local shoreland controls that do not meet the requirements of Section 5.1 may be allowed as building sites without variances from lot size requirements provided the use is permitted in the zoning district, the lot has been in separate ownership from abutting lands at all times since it became substandard, was created compliant with official controls in effect at the time, and sewage treatment and setback requirements of this Ordinance are met.

B. A variance from setback requirements must be obtained before any use, sewage treatment system, or building permit is issued for a lot. In evaluating any proposed variance, the City Council shall consider sewage treatment and water supply capabilities or constraints of the lot and shall deny the variance if adequate facilities cannot be provided.

C. If, in a group of two (2) or more contiguous lots under the same ownership, any individual lot does not meet the requirements of Section 5.1, the lot must not be considered as a separate parcel of land for the purposes of sale or development. The lot

must be combined with the one (1) or more contiguous lots so they equal one (1) or more parcels of land, each meeting the requirements of Section 5.1 as much as possible.

6.2 Additions/Expansions to Nonconforming Structures

A. All additions or expansions to the outside dimensions of an existing nonconforming structure must meet the setback, height, and other requirements of Section 5.0. Any deviation from these requirements must be authorized by a variance pursuant to the variance provisions of the Rogers Zoning Ordinance and pursuant to Section 3.3.

B. Deck additions may be allowed without a variance to a structure not meeting the required setback from the ordinary high water level if all of the following criteria and standards are met:

- (1) the structure existed on the date the structure setbacks were established;
- (2) a thorough evaluation of the property and structure reveals no reasonable location for a deck meeting or exceeding the existing ordinary high water level setback of the structure;
- (3) the deck encroachment toward the ordinary high water level does not exceed fifteen percent (15%) of the existing setback of the structure from the ordinary high water level or does not encroach closer than thirty (30) feet, whichever is more restrictive; and
- (4) the deck is constructed primarily of wood, and is not roofed or screened.

6.3 Nonconforming Sewage Treatment Systems

A. A sewage treatment system not meeting the requirements of Section 5.8 must be upgraded, at a minimum, at any time a permit or variance of any type is required for any improvement on, or use of, the property. For the purposes of this provision, a sewage treatment system shall not be considered nonconforming if the only deficiency is the sewage treatment system's improper setback from the ordinary high water level. However, sanitary facilities shall be discontinued when there is evidence of septic tank effluent percolating from the ground, flowing directly into a lake or stream, or other indications of system failure.

B. The governing body of City of Rogers, Minnesota shall by formal resolution notify the commissioner of its program to identify nonconforming sewage treatment systems in the shoreland. The City of Rogers will require upgrading or replacement of any nonconforming system in the shoreland identified by this program within a reasonable period of time which will not exceed 2 years. Sewage systems installed according to all applicable local shoreland management standards adopted under Minnesota Statutes, section 105.485, in effect at the time of installation may be considered as conforming unless they are determined to be failing, except that systems using cesspools, leaching pits, seepage pits, or other deep disposal methods, or systems

with less soil treatment area separation above groundwater than required by the Minnesota Pollution Control Agency's Chapter 7080 for design of on-site sewage treatment systems, shall be considered nonconforming.

Section 7. Subdivision/Platting

The subdivision and platting requirements of the Rogers Subdivision Ordinance shall apply to land in the "S", Shoreland District. In addition, the following requirements shall also apply:

7.11 Land suitability. Each lot created through subdivision, including planned unit developments authorized under Section 8.0, must be suitable in its natural state for the proposed use with minimal alteration. Suitability analysis shall include, but not be limited to, susceptibility to flooding, existence of wetlands, soil and rock formations with severe limitations for development, severe erosion potential, steep topography, inadequate water supply or sewage treatment capabilities, near-shore aquatic conditions unsuitable for water-based recreation, important fish and wildlife habitat, or any other feature of the natural land likely to be harmful to the health, safety, or welfare of future residents of the proposed subdivision or the community.

7.12 Consistency with other controls. Subdivisions must conform to all ordinances and controls of the City of Rogers. Except as provided in Section 8, a subdivision will not be approved where a later variance from one (1) or more standards in official controls would be needed to use the lots for their intended purpose. In areas not served by publicly owned sewer and water systems, a subdivision will not be approved unless domestic water supply is available and a sewage treatment system consistent with Sections 5.2 and 5.8 can be provided for every lot. Each lot shall meet the minimum lot size and dimensional requirements of Section 5.1, including at least a minimum contiguous lawn area, that is free of limiting factors sufficient for the construction of two (2) standard soil treatment systems. Lots that would require use of holding tanks must not be approved.

7.13 Information requirements. Sufficient information must be submitted by the applicant for the City to make a determination of land suitability. Such information shall include, but not be limited to, the following:

- (1) topographic contours at ten (10) foot intervals or less from United States Geological Survey maps or more accurate sources, showing limiting site characteristics;
- (2) the surface water features required in Minnesota Statutes, Section 505.02, subdivision 1, to be shown on plats, obtained from United States Geological Survey quadrangle topographic maps or more accurate sources;
- (3) adequate soils information to determine suitability for building and on-site sewage treatment capabilities for every lot from the most current existing sources or from field investigations such as soil borings, percolation tests, or other methods;

(4) information regarding adequacy of domestic water supply; extent of anticipated vegetation and topographic alterations; near-shore aquatic conditions, including depths, types of bottom sediments, and aquatic vegetation; and proposed methods for controlling stormwater runoff and erosion, both during and after construction activities;

(5) location of one hundred (100) year flood plain areas and floodway districts from existing adopted maps or data; and

(6) a line or contour representing the ordinary high water level, the "toe" and the "top" of bluffs, and the minimum building setback distances from the top of the bluff and the lake or stream.

7.14 Dedications. When a land or easement dedication is a condition of subdivision approval, the approval must provide easements over natural drainage or ponding areas for management of stormwater and significant wetlands.

7.15 Platting. All subdivisions that create five (5) or more lots or parcels that are two and one-half (2-1/2) acres or less in size shall be processed as a plat in accordance with Minnesota Statutes, Chapter 505. No permit for construction of buildings or sewage treatment systems shall be issued for lots created after these official controls were enacted unless the lot was approved as part of a formal subdivision.

7.16 Controlled Access or Recreational Lots. Lots intended as controlled accesses to public waters or for recreational use areas for use by nonriparian lots within a subdivision must meet or exceed the sizing criteria in Section 5.14.

Section 8. Planned Unit Developments (PUD)

8.1 Types of PUD Permissible

Planned unit developments (PUD) are allowed for new projects on undeveloped land, redevelopment of previously built sites, or conversions of existing buildings and land. The land use districts in which they are an allowable use are identified in the land use district descriptions in Section 4.2 and the official zoning map. PUDs are intended to permit more flexible and creative private developments. Exceptions to the regulations applicable in the land use districts in which the PUD may be approved may be granted upon a finding that conditions applied to the PUD are protective of the public's health, safety and welfare.

8.2 Processing of PUD

Planned unit developments (PUD) must be processed as a conditional use, except that an expansion to an existing commercial PUD involving six (6) or less new dwelling units or sites since the date this Ordinance was adopted is permissible as a permitted use provided the total project density does not exceed the allowable densities calculated in the project density evaluation procedures in Section 8.5. Approval cannot occur until any applicable environmental review process (EAW/EIS) is complete.

8.3 Application for a PUD

The applicant for a PUD must submit the following documents prior to final action being taken on the application request:

8.31 A site plan and/or plat for the project showing locations of property boundaries, surface water features, existing and proposed structures and other facilities, land alterations, sewage treatment and water supply systems (where public systems will not be provided), and topographic contours at ten (10) foot intervals or less. When a PUD is a combined commercial and residential development, the site plan and/or plat must indicate and distinguish which buildings and portions of the project are residential, commercial, or a combination of the two.

8.32 A property owners association agreement (for residential PUD) with mandatory membership, and all in accordance with the requirements of Section 8.6.

8.33 Deed restrictions, covenants, permanent easements or other instruments that: 1) properly address future vegetative and topographic alterations, construction of additional buildings, beaching of watercraft, and construction of commercial buildings in residential PUD; and 2) ensure the long-term preservation and maintenance of open space in accordance with the criteria and analysis specified in Section 8.6.

8.34 When necessary, a master plan/drawing describing the project and the floor plan for all commercial structures to be occupied.

8.35 Those additional documents as requested by the Zoning Administrator that are necessary to explain how the PUD will be designed and will function.

8.4 Site "Suitable Area" Evaluation

Proposed new or expansions to existing planned unit developments must be evaluated using the following procedures and standards to determine the suitable area for the dwelling unit/dwelling site density evaluation in Section 8.5.

8.41 The project parcel must be divided into tiers by locating one (1) or more lines approximately parallel to a line that identifies the ordinary high water level at the following intervals, proceeding landward:

	Unsewered (feet)	Sewered (feet)
General development lakes – first tier	200	200
General development lakes – second and additional tiers	267	200
Recreational development lakes	267	267
Natural environment lakes	400	320
All river classes	300	300

8.42 The suitable area within each tier is next calculated by excluding from the tier area all protected wetlands, natural bluffs, or land below the ordinary high water level of public waters. This suitable area and the proposed project are then subjected to either the residential or commercial planned unit development density evaluation steps to arrive at an allowable number of dwelling units or sites.

8.5 Residential and Commercial PUD Density Evaluation

The procedures for determining the "base" density of a PUD and density increase multipliers are as follows. Allowable densities may be transferred from any tier to any other tier further from the waterbody, but must not be transferred to any other tier closer.

8.51 Residential PUD "Base" Density Evaluation:

A. The suitable area within each tier is divided by the single residential lot size standard for lakes or, for rivers, the single residential lot width standard times the tier depth. Proposed locations and numbers of dwelling units or sites for the residential planned unit developments are then compared with the tier, density, and suitability analyses herein and the design criteria in Section 8.6

8.52 Commercial PUD "Base" Density Evaluation:

A. Determine the average inside living area size of dwelling units or sites within each tier, including both existing and proposed units and sites. Computation of inside living area sizes need not include decks, patios, stoops, steps, garages, or porches and basements, unless they are habitable space.

B. Select the appropriate floor area ratio from the following table:

Commercial Planned Unit Development
Floor Area Ratios*
Public waters classes

* Average unit floor area (sq. ft.)	Sewered general development lakes; first tier on unsewered general development lakes; agricultural, tributary river segments	Second and additional tiers on unsewered general development lakes; recreational development Natural lakes; environment lakes and river segments
200	.040	.020
300	.048	.024
400	.056	.028
500	.065	.032
600	.072	.038
700	.082	.042
800	.091	.046
900	.099	.050
1,000	.108	.054
1,100	.116	.058
1,200	.125	.064
1,300	.133	.068
1,400	.142	.072
1,500	.150	.075

*For average unit floor areas less than shown, use the floor area ratios listed for two hundred (200) square feet. For areas greater than shown, use the ratios listed for one thousand five hundred (1,500) square feet. For recreational camping areas, use the ratios listed at four hundred (400) square feet. Manufactured home sites in recreational camping areas shall use a ratio equal to the size of the manufactured home, or if unknown, the ratio listed for one thousand (1,000) square feet.

C. Multiply the suitable area within each tier by the floor area ratio to yield total floor area for each tier allowed to be used for dwelling units or sites.

D. Divide the total floor area by tier computed in Item C. above by the average inside living area size determined in Item A. above. This yields a base number of dwelling units and sites for each tier.

E. Proposed locations and numbers of dwelling units or sites for the commercial planned unit development are then compared with the tier, density and suitability analyses herein and the design criteria in Section 8.6.

8.53 Density Increase Multipliers:

A. Increases to the dwelling unit or dwelling site base densities previously determined are allowable as set forth in Item B below if the design criteria in Section 8.6 are satisfied and either structure setbacks from the ordinary high water level are increased to at least fifty percent (50%) greater than the minimum setback, or the impact on the waterbody is reduced an equivalent amount through vegetative management, topography, or additional means acceptable to the local unit of government and the setback is at least twenty-five percent (25%) greater than the minimum setback.

B. Allowable Dwelling Unit or Dwelling Site Density Increases for Residential or Commercial Planned Unit Developments:

Density evaluation tiers	Maximum density increase within each tier (percent)
First	50
Second	100
Third	200
Fourth	200
Fifth	200

8.6 Maintenance and Design Criteria

8.61 Maintenance and Administration Requirements.

A. Before final approval of a planned unit development, adequate provisions must be developed for preservation and maintenance in perpetuity of open spaces and for the continued existence and functioning of the development.

B. Open space preservation. Deed restrictions, covenants, permanent easements, public dedication and acceptance, or other equally effective and permanent means must be provided to ensure long-term preservation and maintenance of open space. The instruments must include all of the following protections:

- (1) commercial uses prohibited (for residential PUD's);
- (2) vegetation and topographic alterations other than routine maintenance prohibited;

(3) construction of additional buildings or storage of vehicles and other materials prohibited; and

(4) uncontrolled beaching of watercraft prohibited.

C. Development organization and functioning. Unless an equally effective alternative community framework is established, when applicable, all residential planned unit developments must use an owners association with the following features:

(1) membership must be mandatory for each dwelling unit or site purchaser and any successive purchasers;

(2) each member must pay a pro rata share of the association's expenses, and unpaid assessments can become liens on units or sites;

(3) assessments must be adjustable to accommodate changing conditions; and

(4) the association must be responsible for insurance, taxes, and maintenance of all commonly owned property and facilities.

8.62 Open Space Requirements.

A. Planned unit developments must contain open space meeting all of the following criteria:

(1) at least fifty percent (50%) of the total project area must be preserved as open space;

(2) dwelling units or sites, road rights-of-way, or land covered by road surfaces, parking areas, or structures, except water-oriented accessory structures or facilities, are developed areas and shall not be included in the computation of minimum open space;

(3) open space must include areas with physical characteristics unsuitable for development in their natural state, and areas containing significant historic sites or unplatted cemeteries;

(4) open space may include outdoor recreational facilities for use by owners of dwelling units or sites, by guests staying in commercial dwelling units or sites, and by the general public;

(5) open space may include subsurface sewage treatment systems if the use of the space is restricted to avoid adverse impacts on the systems;

(6) open space must not include commercial facilities or uses, but may contain water-oriented accessory structures or facilities;

(7) the appearance of open space areas, including topography, vegetation, and allowable uses, must be preserved by use of restrictive deed covenants, permanent easements, public dedication and acceptance, or other equally effective and permanent means; and

(8) the shore impact zone, based on normal structure setbacks, must be included as open space. For residential PUD's, at least fifty percent (50%) of the shore impact zone area of existing developments or at least seventy percent (70%) of the shore impact zone area of new developments must be preserved in its natural or existing state. For commercial PUD's, at least fifty percent (50%) of the shore impact zone must be preserved in its natural state.

8.63 Erosion Control and Stormwater Management. Erosion control and stormwater management plans must be developed and the PUD must:

(1) no more than twenty-five percent (25%) of the total project area can be impervious surface;

(2) be designed, and the construction managed, to minimize the likelihood of serious erosion occurring either during or after construction. This must be accomplished by limiting the amount and length of time of bare ground exposure. Temporary ground covers, sediment entrapment facilities, vegetated buffer strips, or other appropriate techniques must be used to minimize erosion impacts on surface water features. Erosion control plans approved by a soil and water conservation district may be required if project size and site physical characteristics warrant; and

(3) be designed and constructed to effectively manage reasonably expected quantities and qualities of stormwater runoff.

8.64 Centralization and Design of Facilities. Centralization and design of facilities and structures must be done according to the following standards:

(1) residential planned unit developments must be connected to publicly owned water supply and sewer systems, if available. On-site water supply and sewage treatment systems must be centralized and designed and installed to meet or exceed applicable standards or rules of the Minnesota Department of Health and Sections 5.2 and 5.8. On-site sewage treatment systems must be located on the most suitable areas of the development, and sufficient lawn area free of limiting factors must be provided for a replacement soil treatment system for each sewage system;

(2) dwelling units or sites must be clustered into one (1) or more groups and located on suitable areas of the development. They must be designed and located to meet or exceed the following dimensional standards for the relevant shoreland classification: setback from the ordinary high water level, elevation above the surface water features, and maximum height. Setbacks from the ordinary high

water level must be increased in accordance with Section 8.53 for developments with density increases;

(3) shore recreation facilities, including but not limited to swimming areas, docks, and watercraft mooring areas and launching ramps, must be centralized and located in areas suitable for them. Evaluation of suitability must include consideration of land slope, water depth, vegetation, soils, depth to groundwater and bedrock, or other relevant factors. The number of spaces provided for continuous beaching, mooring, or docking of watercraft must not exceed one (1) for each allowable dwelling unit or site in the first tier. Launching ramp facilities, including a small dock for loading and unloading equipment, may be provided for use by occupants of dwelling units or sites located in other tiers;

(4) structures, parking areas, and other facilities must be treated to reduce visibility as viewed from public waters and adjacent shorelands by vegetation, topography, increased setbacks, color, or other means acceptable to the local unit of government, assuming summer, leaf-on conditions. Vegetative and topographic screening must be preserved, if existing, or may be required to be provided;

(5) accessory structures and facilities, except water oriented accessory structures, must meet the required principal structure setback and must be centralized; and

(6) water-oriented accessory structures and facilities may be allowed if they meet or exceed design standards contained in Section 5.2 and are centralized.

8.7 Conversions

Existing resorts or other land uses and facilities may be converted to residential planned unit developments if all of the following standards are met:

8.71 Proposed conversions must be initially evaluated using the same procedures for residential planned unit developments involving all new construction. Inconsistencies between existing features of the development and these standards must be identified.

8.72 Deficiencies involving water supply and sewage treatment, structure color, impervious coverage, open space, and shore recreation facilities must be corrected as part of the conversion or as specified in the conditional use permit.

8.73 Shore and bluff impact zone deficiencies must be evaluated and reasonable improvements made as part of the conversion. These improvements must include, where applicable, the following:

(1) removal of extraneous buildings, docks, or other facilities that no longer need to be located in shore or bluff impact zones;

(2) remedial measures to correct erosion sites and improve vegetative cover and screening of buildings and other facilities as viewed from the water; and

(3) if existing dwelling units are located in shore or bluff impact zones, conditions are attached to approvals of conversions that preclude exterior expansions in any dimension or substantial alterations. The conditions must also provide for future relocation of dwelling units, where feasible, to other locations, meeting all setback and elevation requirements when they are rebuilt or replaced.

8.74 Existing dwelling unit or dwelling site densities that exceed standards in Section 8.5 may be allowed to continue but must not be allowed to be increased, either at the time of conversion or in the future. Efforts must be made during the conversion to limit impacts of high densities by requiring seasonal use, improving vegetative screening, centralizing shore recreation facilities, installing new sewage treatment systems, or other means.

Section 9. Severability

The provisions of this Ordinance are severable. If any provision of this Ordinance or the application thereof to any person or circumstance is held invalid, such invalidity shall not affect other provisions or applications of this Ordinance which can be given effect without the invalid provision or application.

Section 10. Effective Date

This Ordinance shall be effective from and after its passage and publication.

Passed by the City Council of the City of Rogers, this 25th day of AUGUST, 2004.

Mayor

Attest:

City Administrator/Clerk

(Published in the North Crow River News on 2/18/08).
